AI Post-Demo Conversion & Call Intelligence Pipeline

Take-home case: AI Program Manager (Sales), Bambinos.live

Prepared by: Pratiksha Tripathi | Repository: https://github.com/pratikshatripathi29/bambinos-ai-sales-pipeline

Executive summary

Bambinos loses revenue between the demo and the payment: calls are not audited (2%), CRM notes are vague, and follow-ups are generic. I designed and prototyped an AI pipeline that audits every call from timestamped evidence, writes clean CRM fields, and drafts personalized WhatsApp follow-ups, with safety rules that decide when **not** to message. I ran it on all six sample calls and the 12-lead CRM table.

What the prototype showed	What it is worth
6 of 6 calls audited, every quote machine-checked against the transcript. **3 calls hit the compliance gate** (802, 803, 806) with **11 critical flags**, including a fake Rank-1 guarantee and a 42% discount against a 10% cap.	**+2 points of conversion = +20 enrollments/week** = about **Rs 1.02 crore/year** at full run-rate (conservative: every enrollment at the average India fee). Year-1 return about **2.6x**; break-even lift about **0.6 points**.
Every one of the 12 leads had a leak. A paying customer (804) was still scheduled for a chase; two failed payments (805, 809) had no fast recovery; two high-intent demos (807, 812) were never called.	**100% call coverage instead of 2%.** Reaching that by hand would take about 567 manager-hours a week (about 14 managers). Counsellors save about 3.3 hours a week each.
Silence is a valid output. The system sends nothing to a parent who said "do not call me again" (803), nothing salesy to one who has paid (804), and holds messages until Academic confirms a batch (806).	**Honest about proof:** a small pilot cannot prove +2 points quickly (about 5,300 demos per arm). The plan judges the pilot on leading indicators first.

How this report maps to the brief

Deliverable	Where	Repository
A: Scorecard and CRM taxonomy	Section 1	docs/scorecard_and_taxonomy.md
B: Workflow, guardrails, compliance	Section 3	workflow/pipeline.md
C: Prototype and sample outputs	Section 2	prompts/ , outputs/ (audits, CRM JSON, WhatsApp, tracker)
D: Funnel math, adoption, 30-60-90	Section 4	docs/funnel_math_and_rollout.md, funnel_math_model.xlsx

Evidence rules I followed: every score cites a timestamped quote; claims the data cannot confirm are labelled **UNVERIFIED**, never "false"; every assumption is labelled and editable in the model.

1. Deliverable A: Sales discovery and call evaluation framework

1.1 What makes a great kids' EdTech sales call

In the six sample calls, the strong ones (801, 804, 805) share one pattern: the counsellor proves they watched the demo, lets the parent describe the pain, then ties the course to that exact pain *before* price. The weak ones skip to price or pressure. The observations below come from these six calls (a small sample), so they are hypotheses to confirm during rollout, not market research.

Parent theme	India (801, 803, 805, 806)	GCC / USA (802, 804)
Who decides	Family decision. The husband handles payment (801); "mummy bol rahi hain exams ke baad dekhenge" (805). Equip the absent decision-maker.	Usually the parent on the call (804 bought within two hours).
Main worry	School results and exams (805), stage fear (801), fear of a fake promise (803: "that sounds like a fake sales promise").	Beating the local alternative and curriculum (802: AED 350 tutor, British exams); schedule fit (804: gymnastics).
Price behaviour	Cash-flow sensitive; wants installments (805). Accepts price when value is clear (801).	A premium price must be justified by method (802). Price was not the blocker in 804.
What closes	A summary the other parent can read (801); an installment plan (805); trust in the teacher (803).	A batch that fits the calendar (804); a clear answer to "how will this fix her specific problem" (802).

Design implication: the AI must read the objection *behind* the objection. "Price issue" in 802 was really "you have not explained why you beat my local tutor."

1.2 Call quality scorecard (7 criteria, 100 points)

#	Criterion	Wt	A rating of 5 looks like	A rating of 1 looks like
1	Rapport and child-specific praise	10	Cites the exact demo moment from the evaluation in the first two minutes	Generic praise, or praise that contradicts the evaluation ("natural Grandmaster" vs engagement 2/5)
2	Diagnosing the learning gap	20	Parent states the pain; rep reflects it linked to the educator's observed gap	Reads questions out and never builds on the answers
3	Curriculum pitch before price	15	Method tied to this child's gap, then price	Price before method (802 at 00:30)
4	Objection handling	20	Names it, answers with evidence, checks it landed, uses policy-approved options	Ignores, dismisses, or answers only with a discount or pressure
5	Trial close and next step	10	Specific agreed step with time and owner; urgency only if factual	Fake deadline, threat, or no next step
6	Compliance and honesty	20	Every claim matches policy and evaluation	Any critical violation
7	Listening and talk balance	5	Rep talk 55% or less and responds to what was said	Rep talk over 70%, or talks over the parent

Compliance gate. Any critical violation caps the call at 40 and alerts a manager, whatever the other ratings. Critical: guaranteed outcomes or ranks; refund promises beyond 14 days; discounts above the 10% cap without a Team Lead code; threats about a child's account; claiming 1-on-1 for a group plan; telling a parent to ignore written policy; rude language; and the policy file's own red flags (Maths class 205: price dumped in the first two minutes; Chess class 401: pushing a standard batch after a young child was overwhelmed). **Minor** (no gate): a refund quoted without its conditions; claims the data cannot confirm.

Anti-gaming rules (call 806 shows why they are needed):

- **Mention is not execution.** A discovery question earns credit only if the rep's next turn builds on the answer. Reading three questions in a row scores the minimum.
- **No quote, no points.** Any rating above 2 needs a timestamped quote that appears verbatim in the transcript.
- **Cross-check the evaluation.** Praise that contradicts the demo educator's notes fails criterion 1.
- **Parent signals override rep claims.** "Are you even listening to me?!" caps criterion 7. Announcing a "mandatory checklist" sets a gaming flag and the call is scored on content only.

Calibration targets were written **before** running any prompt: 801, 804, 805 expected 75 to 92 with no gate; 802, 803, 806 expected gated, 40 or below. All six landed inside their bands without tuning.

1.3 CRM taxonomy: the exact fields the AI writes

Field	Allowed values	Rule
Lead intent	Hot (8-10), Warm (5-7), Cold (1-4); Won if paid	Start at 3, add evidence-backed signals (below), clamp to 1-10. Overrides: do-not-contact gives 1; paid gives Won.
Primary objection	Price | Spouse_Decision | Schedule_Conflict | Child_Not_Interested | Competitor_Comparison (+ Trust_Breakdown, Other, None)	One value. The parent's words decide, not the rep's note. Needs an evidence quote and a status (resolved / unresolved). Sub-types such as exam_period, local_tutor, demo_batch_mismatch.
Child's demo highlight	One sentence	Paraphrased only from the educator's "magic moment" field; null if absent. Never invented.
Next best action	STOP_DO_NOT_CONTACT, ONBOARD_PAID, ESCALATE_MANAGER, SEND_PAYMENT_RECOVERY, ACADEMIC_TEAM_CONTACT, CALL_NOW, MERGE_DUPLICATE, SCHEDULE_CALLBACK, SEND_WHATSAPP_SEQUENCE	The first matching rule in a fixed order, with an owner and a due time.
Kept separate	payment_status, do_not_contact, compliance_flags	A failed payment is a transaction state, not an objection.

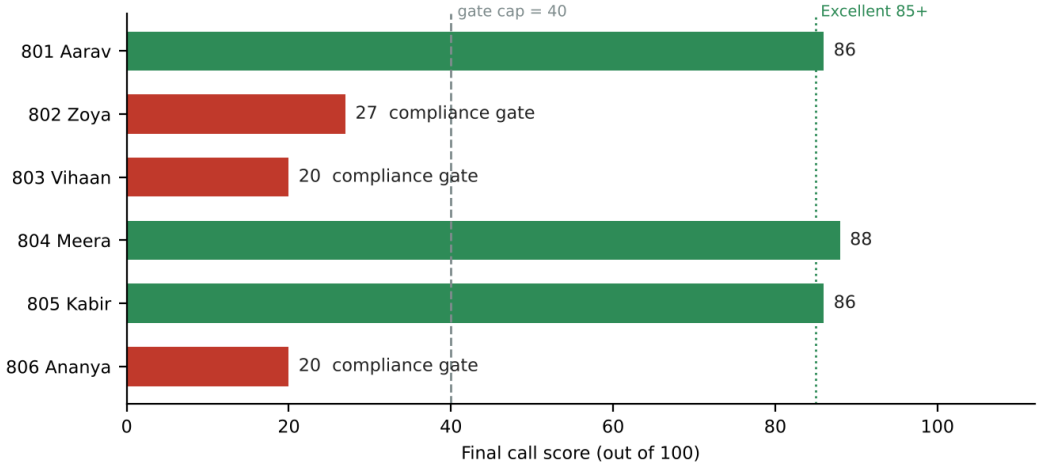

Intent signals that add points	Signals that subtract points
+2 parent states a payment intent with timing ("after dinner") | +2 payment link opened or payment attempted | +1 asks logistics or a method question | +1 demo engagement of 4 or more | +1 price accepted | +1 concrete next step with a time	-2 unresolved objection (other than spouse or competitor) | -1 decision-maker absent or hesitant | -1 competitor comparison unresolved | -1 demo engagement of 2 or less. One objection takes one penalty only.

Worked examples: 805 Kabir = 3 +2 +2 +1 +1 +1 -1 = **9, Hot**. 801 Aarav = 3 +2 +1 +1 +1 +1 -1 = **8, Hot**. 803 Vihaan = do-not-contact override = **1, Cold**.

2. Deliverable C: prototype and sample outputs

Three chained prompts (full text in the repository, each with a strict JSON schema and a "never do" list):

Prompt	Job	Built-in safeguards
1. Call audit	Scores the call, checks every claim against policy, flags violations, coaches the rep	Quotes must be exact substrings; unverifiable claims are UNVERIFIED not false; compliance gate; anti-gaming rules
2. CRM extraction	Writes intent, objection, highlight, next action and a clean note; checks data integrity	Safety overrides first; no invented call signals for uncalled leads; flags catalog gaps and invalid dates
3. WhatsApp follow-up	Writes a 3-touch sequence or a STOP alert	Pre-flight checks in order (do-not-contact, paid, gate, academic hold, failed payment); 60-word limit; banned words; only authorized offers

Final audit score per call. Green = strong calls; red = compliance gate triggered (score capped at 40).

Results across the six calls

Lead / rep	Score	Intent	Primary objection	Next best action	Follow-up output
801 Aarav / Rohan	86 Excellent	Hot 8	Spouse_Decision (open)	CALL_NOW (callback overdue)	3 touches, counsellor approves; first is a forwardable note for the father
802 Zoya / Sneha	27 Critical, gate	Cold 4	Competitor_Comparison / local tutor	ESCALATE_MANAGER	3 touches, manager approves; withdraws the fake deadline; no discount
803 Vihaan / Amitabh	20 Critical, gate (7 critical flags)	Cold 1	Trust_Breakdown	STOP_DO_NOT_CONTACT	**STOP alert. No messages.**
804 Meera / Rohan	88 Excellent	Won 10	Schedule_Conflict (resolved)	ONBOARD_PAID	Onboarding message only, no chase
805 Kabir / Pooja	86 Excellent	Hot 9	Competitor_Comparison (resolved)	SEND_PAYMENT_RECOVERY	Hinglish recovery sequence; day 0 may auto-send
806 Ananya / Karan	20 Critical, gate, gaming	Cold 1	Child_Not_Interested / demo_batch_mismatch	ESCALATE_MANAGER then ACADEMIC_TEAM_CONTACT	3 drafts **blocked** until Academic confirms a batch

What the rep's CRM said versus what the evidence showed

Lead	Rep's CRM entry	Evidence-based finding
802	"price high thinking"	The real objection is a comparison with a local tutor plus an unanswered method question. The rep quoted price at 00:30. The demo evaluation held the answer (Bar-Model solved two fraction word puzzles) and was never used.
803	"good call sent payment link will pay today", Hot	Parent said "Do not call me again" after a Rank-1 guarantee, a 6-month refund promise, a 42% discount (cap 10%) and a blacklist threat. An 18:00 follow-up was still scheduled.
804	Payment_Link_Sent, chase at 20:00	Paid USD 265 at 11:40. The chase would have gone to a paying customer.
805	"Thinking"	A committed buyer whose installment failed at 20:45 (UPI mandate OTP timeout). Next follow-up was about 39 hours later.
806	"kid did not like demo"	A demo batch mismatch: a 6-year-old overwhelmed by older boys. Policy requires a bridge session or age 5-6 micro-batch; the rep pushed the standard batch. No follow-up scheduled.

Pipeline leaks in the 12-lead CRM audit

- **Every lead had at least one leak;** five need action today (803, 804, 805, 809, 801).
- **Two high-intent demos never called** (807, 812) and **three calls logged with no transcript** (808, 809, 810), so they cannot be audited.
- **A duplicate lead** (811) was routed to a second counsellor while the first held a seat for the same family.
- **Catalog gaps make reps improvise:** no price for class 108, GBP, a 12-month package, or the age 5-6 chess micro-batch.
- **System mismatches:** the gateway flags discounts over 15% but policy says 10%; order 99402 shows 12,000 AED for a 1,200 AED course.
- **About Rs 1.55 lakh of recoverable pipeline** across 9 leads (illustrative FX), before counting the Rs 9,500 compliance incident.

Example outputs

803 Vihaan: STOP alert (no WhatsApp generated). "Parent asked not to be contacted after the counsellor gave an unauthorized Rank-1 guarantee, a 6-month refund promise, a 42.1% discount (cap 10%) and a threat to blacklist a 7-year-old... Default is no outreach." System actions: set do-not-contact; cancel the 18:00 follow-up; void link 99403; block counsellor 212; review all his other calls.

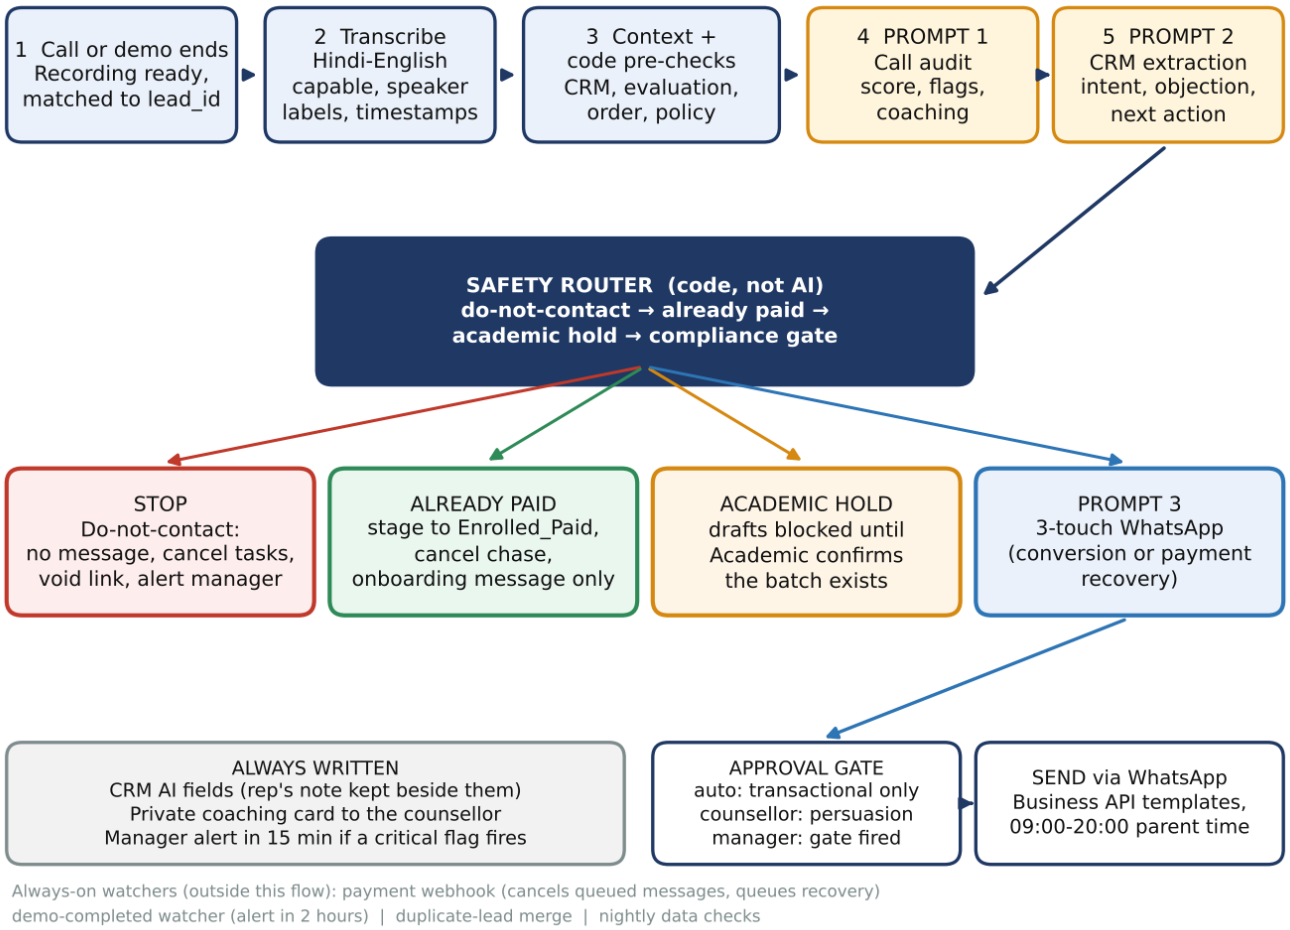

805 Kabir: day-0 payment recovery (Hinglish, auto-send allowed). "Namaste Rajesh sir, kal raat Rs. 5,400 ka payment bank OTP time-out ki wajah se complete nahi ho paya, aapki koi galti nahi. Yeh naya one-time link hai: [PAYMENT_LINK]. UPI ya card, jo aapko aasaan lage. Kabir ne PEEL se 60 second bina 'umm' ke bola tha, hum usi flow ko aage badhayenge."

802 Zoya: day-0 message (manager approves). "Hi Amina ma'am, thank you for your time today. Please ignore the 30-minute link deadline; there's no rush. You asked what method Mr. Vikram used: Zoya solved two fraction word problems from the British curriculum on her own with our visual Bar-Model, and said it was 'so easy!'"

3. Deliverable B: end-to-end workflow, guardrails and automation

Design principle: code enforces the rules; AI exercises judgement. Payment status, do-not-contact, discount maths and send windows are checked by deterministic code. The AI audits, classifies and writes. Humans approve persuasion.

Post-call pipeline: from recording to a safe, personalized follow-up

Always-on watchers (outside this flow): payment webhook (cancels queued messages, queues recovery) demo-completed watcher (alert in 2 hours) | duplicate-lead merge | nightly data checks

3.1 What the always-on watchers fix

Leak found in the data	Control that closes it
804 paid but still being chased	Payment webhook cancels the chase and sets Enrolled_Paid
805 and 809 failed payments, follow-up days away	Webhook queues a recovery message for 09:00 the next morning
807 and 812 high-intent demos never called	Demo-completed watcher alerts within 2 hours, then the team lead after 4
811 duplicate sent to another rep	Duplicate check on lead creation; merge and keep the original owner
810 follow-up date before the call; 808-810 calls with no transcript	Nightly hygiene job and a recording-coverage metric
803 rep created a Rs 5,500 link for a Rs 9,500 course	The payment-link tool enforces the policy's 10% cap; above that needs a Team Lead code (prevention, not detection)

3.2 Guardrails: who can send what

Action	Mode	Why / example
Write AI fields to the CRM; private coaching card to the rep	Auto	Reversible; the rep's original note is kept beside the AI version
Move stage to Enrolled_Paid	Auto	Comes from the payment gateway, not AI judgement (804)
Payment-recovery message for an amount the parent already agreed; onboarding after payment	Auto	Transactional, no new offer (805, 804)
Any persuasive follow-up; any message mentioning a discount, installment or bridge session	Counsellor approves (Approve / Edit / Skip)	Tone needs a human; code checks offers against policy (801, 805)
Any message on a lead where the compliance gate fired	Manager approves	The rep's credibility is already damaged (802, 806)
Message waiting on another team	Blocked	Do not promise what Ops has not confirmed (806)
Any outreach to a do-not-contact parent	Blocked at three layers	CRM flag, workflow branch and WhatsApp suppression list (803)
A discount above 10%	Blocked in the payment-link tool	Needs a Team Lead code

If an approval is not given, the draft escalates to the team lead after 2 hours. It never auto-sends: silence from a human is not consent.

3.3 Compliance red flags the AI must catch

Red flag	How it is detected	Alert
Guaranteed outcome or rank; refund promise beyond 14 days; "off the record"; threat about a child's account	Pattern pre-screen in code, then AI confirms in context	Manager within 15 minutes
Discount above 10% or without a Team Lead code	Code compares the order's discount to the policy cap; AI also reads the call	Manager within 15 minutes
Price dumped before method (Maths 205)	Code checks the timestamp of the first price mention; AI checks that no method was explained	Manager within 15 minutes
Standard batch pushed after a 5-6 year old was overwhelmed (Chess 401)	AI reads the call together with the demo evaluation	Manager within 15 minutes
Rude or dismissive language, 1-on-1 claimed for a group plan	AI (language-aware, so Hinglish is not misread)	Manager within 15 minutes
Rep reading the checklist to game the score	AI gaming flag	Team lead, weekly coaching
Refund without its conditions; unverifiable claims	AI (PARTIAL / UNVERIFIED)	Private coaching card only

Every critical flag is confirmed, marked false positive, or sent for retraining by a manager; the false-positive rate is tracked.

3.4 No-code stack, platform constraints and safeguards

Layer	Prototype	Production
Recordings	Zoom cloud recording webhook	Telephony provider with a consistent lead_id
Transcription	Whisper API	Deepgram or AssemblyAI. Must handle Hindi-English mixing; test on call 805 first
Orchestration	n8n (three workflows: post-call, payment events, watchers)	n8n or Make
CRM and data	Google Sheet tracker (in the repository)	Existing CRM through its API
AI	Claude API, temperature 0 for prompts 1 and 2, JSON schema validation	Same, with the model version pinned
Messaging and approvals	WhatsApp Business via a provider; Slack buttons	Same. Template approval takes days: start early
Payments	Razorpay and Stripe webhooks	Source of truth for payment status

- **Confirm with Legal before launch:** recording-consent notices (some US states, such as California, need all-party consent); data protection in India, the UK and the UAE; WhatsApp opt-in and pre-approved templates outside the 24-hour reply window; retention of transcripts. I am not a lawyer and rules change.
- **Safeguards:** a validator rejects any AI output whose quotes are not in the transcript or whose message contains an unknown price, date or link; the six sample calls are a fixed regression test before any prompt or model change; one kill switch pauses all sending while auditing continues.

- **Biggest accuracy upgrade:** an approved fact sheet (batches, seat counts, features, prices for every class and currency). Many claims in the sample were UNVERIFIED only because the data has none.

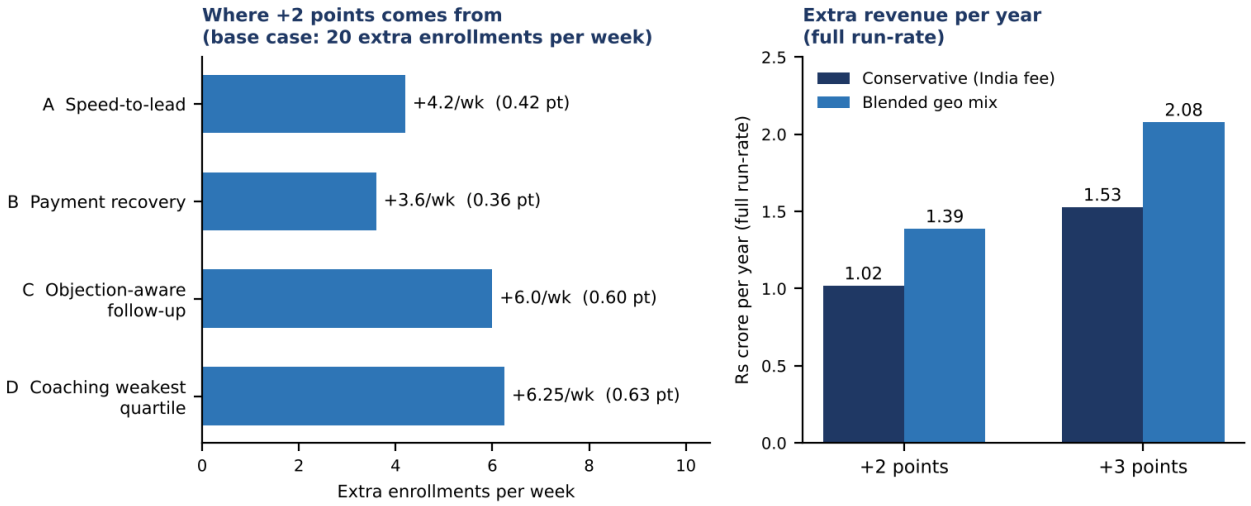

4. Deliverable D: revenue impact, adoption and 30-60-90 rollout

All figures come from **funnel_math_model.xlsx** (live formulas; every assumption is one editable cell). Case-brief numbers are given; everything else is an assumption to replace with pilot data.

4.1 Funnel math

	Baseline	+2 points	+3 points
Conversion (1,000 demos/week, 40 counsellors)	15%	17%	18%
Enrollments per week	150	170	180
Extra enrollments per week / month / year		**20 / 87 / 1,040**	**30 / 130 / 1,560**
Extra per counsellor per week (baseline 3.75)		0.5	0.75
Extra revenue per year, conservative (average India fee Rs 10,917, 90% realization = Rs 9,825)		**Rs 1.02 crore**	**Rs 1.53 crore**
Extra revenue per year, blended geo mix (70/15/15, illustrative FX)		Rs 1.39 crore	Rs 2.08 crore
Year-1 realized after ramp (83% of run-rate)		**Rs 85 lakh**	Rs 1.28 crore

+2 points is about one extra enrollment every two weeks per counsellor. I lead with the conservative price so the number survives challenge.

4.2 Where the lift comes from: what must be true

Lever	Assumption (to be replaced by pilot data)	Extra / week
A. Speed-to-lead (807, 812 sat uncalled)	6% of demos not called within 24h; conversion rises from 5% to 12% when called within 2 hours	4.2
B. Payment-failure recovery (805, 809)	1.5% of demos hit a failed payment; 40% are abandoned today; recovery saves 60% of those	3.6
C. Objection-aware follow-up (801, 802, 805)	40% of demos end as "thinking"; follow-up lifts them by 1.5 points	6.0
D. Coaching the weakest quartile (802, 803, 806)	They handle 25% of demos, trail the median by 5 points; coaching closes half the gap	6.25
Total	**Base case +2.0 points.** Pessimistic (half the effect) +1.0. Stretch (1.5x) +3.0.	**20.05**

+3 points needs everything to work at once, so it is the stretch case. Levers may overlap, so the total leans upward. The 12-lead sample is a curated set of traps and was not used to estimate rates.

4.3 Manager hours, cost and return

Manager and counsellor hours	Cost and return
Manager time today (2% audit, 20 calls): **11.7 h/week**	AI cost per call about Rs 22; per week about Rs 22,100
100% audit **by hand**: 583 h/week (about 14.6 managers)	Running cost about **Rs 25 lakh/year**; year-1 total about **Rs 33 lakh** incl. Rs 8 lakh build
100% scored with AI; humans review flags and a 5% sample: **16.7 h/week**	Year-1 benefit at +2 points **Rs 85 lakh: net Rs 52 lakh, 2.6x**
Saved versus reaching 100% by hand: about 567 h/week (about 14 managers)	At +1 point (pessimistic): Rs 43 lakh, 1.3x. **Break-even lift about 0.6 points**
Counsellor admin saved: **3.3 h/week each** (AI writes the CRM note and drafts follow-ups)	Not counted: refunds and complaints avoided, recovered installments, better batch matching

Honest framing: managers do not get hours back versus today (about 12 rises to about 17); they get **100% coverage instead of 2%**. Vendor prices and token counts are illustrative; confirm before presenting. Even doubling the running cost leaves the +2 point case clearly positive.

Can a pilot prove it? Detecting 15% to 17% with 95% confidence and 80% power needs about **5,265 demos per arm**, about 10.5 weeks at 20 vs 20 counsellors (a 1-point lift needs about 20,500). So the pilot is judged first on **leading indicators** (speed-to-lead, payment-recovery rate, note quality, draft acceptance, rep satisfaction, flag accuracy); conversion is directional during the pilot and confirmed by a staggered rollout, about day 105.

4.4 Managing rep pushback: make the tool theirs

Reps who feel policed will game the score (call 806 already shows this), argue every flag, or quietly stop using the tool. Reps adopt a tool that makes them money and saves them time, so the rollout leads with what reps get.

What the rep gets	Why they care
The AI writes the CRM note, intent and next action	About 8 minutes saved per call; a stale stage like Rohan's on 804 simply does not happen
Follow-ups drafted that reference what the child actually did	Better replies, less effort
Payment recovery runs itself, and the credit stays with the rep (805, 809)	More closed deals with no extra work
Reminders for leads that matter (a promised callback, a hot demo)	Protects their commission
Private coaching first: two strengths, two fixes, and a better line to try	Feels like a coach, not a report card
A dispute button on any flag, reviewed by a human	Fairness

Rules of the road, published before launch:

- **Two separate tracks.** Coaching (the scorecard) is private to the rep for the first 30 days. Compliance (guarantees, off-policy discounts, threats) is zero-tolerance and goes to a manager. Reps always know which track a flag is on.
- **No stack-ranking and no penalty from AI scores for 90 days,** except a confirmed critical compliance breach. Boards show improvement, not rank.
- **A rep council of six counsellors co-designs the rubric,** including strong performers. The scorecard is public.
- **Reward outcomes, not checklists.** The rubric scores listening, so the way to score high is also the way to sell more.
- **Celebrate great calls.** A weekly "Call of the Week" with exact lines (801 Rohan's spouse handling, 805 Pooja's competitor answer) shows the tool spots good work too.
- **Start with volunteers,** then everyone. Confirm with HR and Legal how AI scores may be used. Managers get a weekly 20-minute coaching session per rep and review exceptions, not everything.

Adoption KPIs: weekly active reps, coaching cards opened, drafts accepted with little or no edit, approval turnaround, dispute rate and outcomes, rep satisfaction.

4.5 30-60-90 day rollout

Phase	Actions	Exit criteria
Days 1-30 Fix leaks, shadow mode	Wk 1: approved fact sheet (batches, features, prices incl. class 108, GBP, micro-batch); gateway cap aligned to 10% with a Team Lead code above it; recording coverage to 100%. Wk 2: payment webhook, demo-completed watcher, duplicate merge, suppression list. Wk 3: audit 100% of calls in shadow mode (no rep visibility); calibrate against about 100 human-scored calls; test Hinglish transcription. Wk 4: rep council reviews the rubric; WhatsApp templates submitted; baselines measured.	AI and human agree on 90%+ of critical flags; scores within 10 points on 80%+ of calls; templates approved; baselines recorded
Days 31-60 Pilot	20 volunteer counsellors vs 20 control. Coaching cards, AI CRM fields, approval queue, auto-sent payment recovery and manager alerts go live for the pilot group. Weekly calibration; every false positive feeds back into the prompts; regression test before any prompt change.	90%+ of high-intent demos called within 2 hours; recovery sent next morning on 100% of failures; 70%+ of drafts accepted; critical-flag false positives under 10%; rep satisfaction positive
Days 61-90 Scale and lock in	Roll out to all 40 (staggered, to preserve the comparison). Manager dashboard and weekly coaching ritual. Align incentives (recovered payments credited to the rep). Add GCC and US send windows. Quarterly prompt and policy review. More automation only after false-positive and complaint data support it.	100% call coverage; critical flags reach a manager in 15 minutes; leading indicators met; directional conversion lift. Statistical confirmation about day 105

4.6 Key risks

Risk	Mitigation
Reps resist or game the score	Section 4.4; evidence-based scoring; separate coaching and compliance tracks
AI misjudges a call or mis-transcribes Hinglish	Quotes must match the transcript; humans review every critical flag; dispute button; low-quality transcripts go to review
A bad message reaches a parent	Humans approve persuasion; only transactional messages auto-send; kill switch
Lift smaller than hoped	Break-even is about 0.6 points; the compliance and visibility value remains

5. Limitations, honest notes and repository map

What a reviewer should know

- **The outputs were produced by applying the three prompts in a Claude chat, not by an automated API run.** Anyone can reproduce them by pasting a prompt plus the inputs. A script then verified every evidence quote against the transcripts, the score arithmetic and every message length.
- **Many claims are marked UNVERIFIED** because the data has no batch roster, curriculum document or feature list. Strong calls such as 801 lose a few compliance points for this reason. The fix is an approved fact sheet.
- **The intent score has a known blind spot.** Ananya (806) scores 1 of 10, but her mother stated a clear condition for enrolling, so she is recoverable. I recorded this and propose a "parent states a fixable condition" signal for version 2.
- **Leads 807 to 812 get CRM records but no WhatsApp drafts**: they need a human call first or have no transcript.
- **Revenue figures are model outputs, not forecasts.** The sample of 12 leads is curated, FX rates are illustrative round numbers, LEAD-808 uses a proxy price and LEAD-806 a placeholder. Vendor prices are illustrative.
- **Legal, privacy and WhatsApp-policy points** in section 3.4 must be confirmed by the company before launch.
